PORTFOLIO danielisrael.dev

PROFESSIONAL SUMMARY

Full-Stack Developer specializing in React, TypeScript, and cloud-based architectures with experience building end-to-end web and mobile applications. Skilled in API integrations, serverless infrastructure, and AI-assisted development. Proven track record delivering automation systems, real-time features, and cross-platform products from scratch.

PROFESSIONAL EXPERIENCE

Senior Full Stack Developer

Nov 2025 – Feb 2026

InsightLabs

- Architected Zendesk integration enabling customers to connect their support platform and dynamically import tickets into the application
- Built customer-facing automation pipeline for scheduled analyses on document types, generating charts, PDF reports with email delivery
- Created shared type definitions in Python and TypeScript ensuring runtime type safety across frontend and backend systems
- Enhanced dashboard with standardized UI components, modal navigation, and comprehensive design language

Mobile Developer

Jan 2025 – Oct 2025

Secrets AI

- Built AI companion app from scratch with React Native and Expo, featuring comprehensive chat interfaces with real-time messaging
- Designed and implemented full-stack in-app purchase system with Node.js backend, SQL database, and React Native frontend for monetization
- Implemented offline data storage and image caching system using hash-based lookups to optimize performance
- Managed complex application state with Redux for tracking unread messages, user preferences, and real-time chat status

Mobile Front End Developer

Jul 2023 – Dec 2024

Goose Insurance Services

- Rebuilt marketing website with Astro JS, reducing load times from 8s to milliseconds and cutting infrastructure costs by 10x
- Built internal video management dashboard with Firebase for uploading, tagging, and controlling app content display
- Designed state-driven UI architecture where backend payloads directly control component visibility and behavior
- Developed real-time testing dashboard using Firestore subscriptions, enabling parallel test workflows and 5x QA speed improvement

Full Stack Developer

May 2020 – Sep 2023

PhoneMe Project UBC

- Migrated from Fastify backend to Firebase serverless architecture, reducing costs from $200/month to $0 while handling spiky usage
- Built offline-capable poem creation with media upload, 3D search functionality, and AI-enhanced analysis system with REST APIs
- Developed responsive web interface with Next.js and Tailwind for cross-device compatibility

EDUCATION

Bachelor of Computer Science — 2018 – 2022

University of British Columbia
Algorithms, ML, computer vision. Java, C/C++, Python, Haskell, TypeScript. 3rd place hackathon 2019.

Bachelor of Applied Human Sciences — 2009 – 2014

Concordia University – Montreal, QC
Dean's List. Research Assistant, Teaching Assistant. Presented at SSHRC conference.

TECHNICAL SKILLS

Languages
TypeScript, JavaScript, Python, Java, C/C++

Backend, Cloud & APIs
Node.js, Flask, Firebase (Firestore, Auth, Cloud Functions), GCP (Cloud Run, Cloud Functions, Cloud Scheduler), REST APIs, SQL, Zendesk integrations

Frontend & Mobile
React, React Native, Next.js, Expo, Redux, Tailwind, Astro JS, Storyblok, Electron, browser 3D visualization

Tools, AI & Delivery
Git, EAS, Cursor, GitHub Copilot, Claude, iOS/Android deployment, push notifications, in-app purchases, document/table editing UIs
